

To whom it may concern,

My name is Brad Sparks. During my time working with Jordan, I was the Founder and CEO of a technology company called Pomarium. I hired Jordan as a lead engineer after we made the decision to move off of part-time work, contractors, and dev shops. We had about a team of 7 engineers, product, data researchers and analysts. Jordan was one of a number of hires we made that we had no personal connections to. I provide all of that context because it is important to highlight a few things about Jordan.

- 1) Jordan took ownership of his role. We were a small team and to be successful, everyone had to go above and beyond their baseline minimum. Jordan did that consistently. He was dependable for the tasks he was expected to complete, but he also tackled items beyond his scope. He was curious to learn, hungry to contribute, and bought fully into the vision and mission of the company.
- 2) Jordan was an effective communicator cross-functionally. With the team of our size it was imperative that everyone could communicate clearly, consistently, and confidently. Jordan did that with ease. His background as a practice owner in a service business served him extremely well to be kind, succinct, and honest in his communication.
- 3) Jordan was great at engineering. Admittedly, I am not a technologist, but my CTO and COO had run and managed engineering teams at startups, publicly traded companies, and for some of the largest government contracts. Both of them consistently praised Jordan's competency, desire to learn, coachability, confidence in his work, and the timeliness of his projects.

It is bittersweet to write this as ultimately I wish that Jordan and I were still working together. I had to wind down the company due to a lack of funding and an inability to find product market fit. That is an issue that was not Jordan's to own or solve, and he more than pulled his weight at our company. Without a doubt I would recommend Jordan for any role related to engineering, and to be honest I believe his skill set would also be transferable to most roles that you would be looking for.
